It luman zsig9 is overexpressed in a number of tumours including brain, liver, lung, oesophageal, stomach, colon, rectal, thyroid and lymphoma tumors, and thus can be used as an indicator for cancer. The invention provides polynucleotides (see AAW88469-70) encoding zsig9 polypeptides (see AAW88469-77) including mature polypeptides, other processed forms, variants and the mouse orthologues. The zsig9 gene, or probes derived from it, can be used to determine if zsig9 is present on chromosome 10, and if a mutation has occurred. Antibodies raised against zsig9 can be used as diagnostic agents to determine the presence of zsig9, and thus the presence of cancer. They can also be labelled with this the presence of cancer. They can also be labelled with zadioisotopes or fused with toxins and used to treat tumours which overexpress zsig9. Antisense nucleotides derived from zsig9 collar and so be used to inhibit the growth of tumour cells. Zsig9 proteins can be used to enhance the growth or development of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present DNA sequence is an ortholog encoding the secretory protein-9, 28199 derived from mouse. It is overexpressed in tumours. Antagonists, antibodies and antisense nucleotides to Zsi99 are useful for detecting and treating tumours. The antagonist may be an antibody or receptor to Zsi99 and it may be radio-labelled or fused to a polypeptide toxin. It can be used for down regulating the overexpression of Zsi99. The gene sequence can be used as nucleic acid probes to detect RNA encoding Zsi99. The Zsi99 sequence facilitates improved diagnostic and therapeutic techniques for detecting and treating cancers, especially of the brain,

```
This sequence represents the coding sequence of human cDNA clone HP10390 which encodes a 20 kD protein with one putative transmembrane domain in the N-terminus. The cDNA was isolated from a human stomach cancer cell line cDNA library. The protein has no homology with any known protein. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically.
                                                                                                                                                                                                                                            Human proteins with transmembrane domains, inv
proliferation and differentiation, useful for

                                                                                                            Page 73-74; 85pp; English
```

This cDNA clone encodes human secretory peptide-9, or zsig9, cvariant (see AAW88474). Zsig9 (see also AAW88469) is overexpressed in chuman brain, liver, lung, oesophageal, stomach, colon, rectal, cthyroid and lymphoma tumors. Thus, Zsig can be used as an close from a full-term pregnancy cDNA library which contained an cc clone from a full-term pregnancy cDNA library which contained an cc expressed sequence tag (see AAX06971). The invention provides comply contained an cc expressed sequence tag (see AAX06971). The invention provides (see AAW88469-77) including mature polypeptides, other processed forms, cc variants and mouse orthologues. The zsig9 gene, or probes derived cc from it, can be used to determine if Zsig9 is present on chromosome cl 2, and if a mutation has occurred. Antibodies raised against cc zsig9 can be used as diagnostic agents to determine the presence of csig9, and thus the presence of cancer. They can also be labelled with radioisotopes or fused with toxins and used to treat tumours c which overexpress zsig9. Antisense nucleotides derived from zsig9 c cNA can also be used to enhance the growth or development of the proteins can be used to enhance the growth or development of the proteins can be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also be used to enhance the growth or development of the cx can also can be used to enhance the growth or development 'n

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Ş
                                    The present DNA sequence is a gene encoding the variant of the secretory protein-9, Zsig9 that arises due to alternative splicing, allelic variation or silent mutations that result in amino acid changes. This sequence is mapped to the human chromosome 12q15 region. It is overexpressed in tumours. Antagonists, antibodies and antisense nucleotides to Zsig9 are useful for detecting and treating tumours. The antagonist may be an antibody or receptor to Zsig9 and it may be radio-regulating the overexpression of Zsig9. The gene sequence can be used as nucleic acid probes to detect RNA encoding Zsig9. The Zsig9 sequence facilitates improved diagnostic and therapeutic techniques for detecting and treating cancers, especially of the brain, liver, stomach, lymphoma, etc., at an early stage.

The cDNA was isolated from a human stomach cancer cell line cDNA library. The protein has no homology with any known protein. The protein may be used to raise specific antibodies, as assay reagents, as diagnostic tissue markers, for the isolation of cognate receptors, ligands and binding proteins, and as biologically active agents. Nucleotides encoding the protein may be used as primers and probes or antisense molecules, and in gene therapy. Cells transformed with these nucleotides may be used to screen for agonists and antagonists which are potentially useful therapeutically.

```

The invention relates to modulators of a cancer-related genes. Also described are: (1) processes for identifying an anti-neoplastic agents comprising contacting a cell exhibiting neoplastic activity with a compound first identified as a cancer related gene modulator, and detecting a decrease in the neoplastic activity. (2) a process for determining the cancerous state of a cell by determining an increase in the level of expression of at least one gene, where an elevated expression relative to a known non-cancerous cell indicates a cancerous state or potentially cancerous state. The anti-neoplastic agent is useful for treating cancer or for protecting an animal against cancer. The immunogenic composition is also useful for treating cancer in an

Preferably, the animal is a human. The cancer-linked genes and polypeptides are also useful as targets for cancer therapy or chemotherapy. The present sequence represents a cancer-linked gene located on chromosome 12, which encodes transmembrane protein 4.

The method comprises inoculating an animal with a vector expressing a fusion protein having an antigen protein fused to the C-terminal side (extracellular) of a transmembrane domain protein (the N-terminal side of which is intracellular), and then isolating and purifying the antibody from the animal. The antibodies can be used as drugs, vaccines, diagnostic reagents and laboratory reagents. The present sequence encodes a polypeptide, designated HP10390, which was used in the course of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      S
cc polypeptide comprising a portion of an ovarian tumour protein. The cc sequences of the invention are useful for stimulating an immune response cc and for treating ovarian cancer in a patient. An antigen presenting cell that expresses the sequences is useful for treating ovarian cancer by c incubating CD4+ and/or CD8+ T cells isolated from a patient. The T cells can then be proliferated and administered to the patient to inhibit the cc development of cancer. The DNA sequences are useful as probes or primers cf for nucleic acid hybridisation, to direct expression of a polypeptide in appropriate host cells. Detecting the presence of a cancer in a patient clivolves obtaining a biological sample from the patient, contacting the biological sample with an agent that binds to the protein, detecting the growthin to a predetermined cut-off value and determining the presence of cancer. Sequences ABK09464-ABK09802 represent PCR primers and CDNA cc molecules encoding ovarian tumour proteins of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              13-JUN-2000;

The secreted CC protein gene sequences are deposited with the ATCC under deposit number CC ATCC 209118. Host cells comprising recombinant vectors containing the CC acid sequences are used for the recombinant production of the CC conditions e.g. The polynucleotide and amino acid sequences are useful CC conditions e.g. by protein or gene therapy. Pathological conditions can CC sample or by determining the amount of the mew polypeptides in a CC polynucleotides. Dased on which tissues they are most highly expressed CC in, and include developing products for the diagnosis or treatment of caneer, tumours, developmental abnormalities and foetal deficiencies, schizophrenia, immunological disorders, and cognitive disorders, caneer, tumours, developmental abnormalities and foetal deficiencies, schizophrenia, immunological disorders, immune deficiency diseases (AIDS), mood disorders, respiratory disorders, arthritis, asthma, CC disorders or gastrointestinal disorders, skeletal disorders, cardiovascular disorders, endocrine contentifying their binding partners. The polypeptides are also useful gene encoding a human secreted protein (see descriptor line for gene

                                                                                                                                                                                                                                                                                                                                                                                                                                     breast, prostate, rectal, cervical of liver tumours by comparing PRO CC polypeptide expression in a cell sample to that in a control sample. Some of the 275 sequences are also useful to stimulate the release of tumour necrosis factor-alpha (TNF-alpha) from human blood, the CC proliferation or differentiation of chondrocytes, the proliferation or gene expression in pericyte cells, the release of proteoglycans from CC cartilage, the proliferation of inner ear utricular supporting cells or CC of T-lymphocytes, the release of a cytokine from peripheral blood concoytes (PBMCs), or the proliferation of endothelial cells. Some of the PRO polypeptides may modulate glucose or free fatty acid uptake by skeletal muscle cells or by adipocytes; or inhibit binding of A-peptide to factor VIIA. The PRO polypeptides can be used in assays to identify CC molecules involved in binding interactions. The polynucleotides encoding PRO polypeptides can be used to generate probes, antisense RNA/DNA, ctransgenic or knock out animals and can be used in gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  17-MAY-2000;

                                               AAX97813-X97906 represent extended cDNA's which encode novel human secreted proteins (see AAY36129-Y36222) and which have cytostatic, thrombotic and osteopathic activity. The extended cDNAs can be used to express secreted proteins or parts of them or to obtain antibodies

Six hundred and twenty three polynucleotides derived from a human tissue sources which encode secreted proteins, useful treating immune deficiencies and disorders such as autoimmur autoimmune variety for disorders

Claim 1; Page 297; 393pp; English.

The present invention relates to the isolation of novel cDNA sequences which encode human secreted proteins. The cDNA sequences have been content of the con proteins.

The extended cDNAs can be used to express secreted proteins or parts of them or to obtain antibodies capable of binding to the secreted proteins. They may also be used in diagnostic, forensic, gene therapy and chromosome mapping procedures. Uses also include design of expression vectors and secretion vectors.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            cc sequence tags (SESTS), isolated from human, mouse, chicken and rat Ctissue sources. The SESTS can have a range of activities depending on the second content of the tissues they were isolated from. The activities depending on chemotactic; proliferative; immunomodulatory; haematopoletic; chemotactic; antipacterial; antifungal; antiviral; antidiabetic; cytostatic; antipacterial; antilpropal; antiviral; antidiabetic; cytostatic; unlarrary; antilpropal; antiviral; antidiabetic; conciropic; antiparkinsonian; antipsoriatic; cerebroprotective; conciropic; antiparkinsonian; antipsoriatic; cerebroprotective; canticonvulsant; and antidepressant. The SESTs can be used for gene conciropic; antipactions of full-length cDNAs and genomic DNA concludes which correspond to the SESTs. Proteins encoded by the SESTs care useful as probes for the concludes which correspond to the SESTs. Proteins encoded by the SESTs care useful as genomic DNA concludes which correspond to the SESTs. Proteins encoded by the SESTs care useful as activity and raising concludes. They may be useful for treatment of autoimmune disorders continuity becomes a conditions. CC (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, csteoporosis, osteoarthritis, central nervous system disorders (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation constants. ANA45926 to ANA45931 represent linker variants which are given in the exemplification of the present invention.

Center project Information
Center project name: HMKZ
Center clone name: RP11-764L14
Sequencing vector: M13; L08821
Chemistry: Dye-terminator Big Dye: 100% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 16127% bases at least 040
Consensus quality: 174843 bases at least 020
Estimated insert size: 1638803; sum-of-contigs estimation
Quality coverage: 6x in 020 bases; agarose-fp estimation
Quality coverage: 5.8x in 020 bases; sum-of-contigs estimation sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a "working draft' sequence. It currently consists of 5 contigs. The true order of the pieces is not known and their order in this sequence record is

Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                           NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Falls,T., Ferraguto,D., Flagg,N., Ford,J., Foster,P., Frantz,P., Gabisi,A., Gao,J., Garcia,A., Garner,T., Garza,N., Gill,R., Gorrell,J.H., Guevara,W., Gunaratne,P., Hale,S., Hamilton,K.,
                                                                                                                                                                                                                                                                                                               Center clone name: RP11-348M3

Sequencing vector: M.3;
Chemistry: Dye-primer Bodipy: 5% of reads
Chemistry: Dye-terminator Big Dye: 95% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 141522 bases at least Q40
Consensus quality: 147097 bases at least Q20
Estimated insert size: 150706; sum-of-contigs estimation
                                                                                                                                                                                                                                                                                           Quality coverage: 4x in Q20 bases; sum-of-contigs estimation
                                                                                                                     ₿

Center project Information
Center project name: HAPC
Center clone name: RP11-183H16
Center clone name: RP11-183H16
Sequencing vector: Plasmid;
Sequencing vector: M13;
Chemistry: Dye-primer Bodipy: 2% of reads
Chemistry: Dye-terminator Big Dye: 98% of reads
Chemistry: Dye-terminator Big Dye: 98% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 183845 bases at least Q40
Consensus quality: 184849 bases at least Q30
Consensus quality: 185447 bases at least Q30
Estimated insert size: 159026; sum-of-contigs estimation
Quality coverage: 8x in Q20 bases; sum-of-contigs estimation

* NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* consists of 9 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

as soon as it is available and the accession number will be preserved.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one MI3 subclone; and the assembly was confirmed by restriction digest.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted (26-JAN-2002) Lita Annenberg Hazen Genome Sequencing Center, Cold Spring Harbor Laboratory, 1 Bungtown Road, Cold Spring Harbor, NY 11724, USA

NOTE: Estimated insert size may differ from sequence length
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently
consists of 42 contigs. The true order of the pieces
is not known and their order in this sequence record is
arbitrary. Gaps between the contigs are represented as
runs of N, but the exact sizes of the gaps are unknown.
This record will be updated with the finished sequence
as soon as it is available and the accession number will
be preserved.
